

## **WAGER Version 2.0.2 Release Notes**

Release Date: 29th May, 2009

The following enhancements were incorporated in this release:

### Study Manager Enhancements

1. The ability to delete and reload multiple consent forms per patient is now supported.
2. The suffix used for data files that can be downloaded from within WAGER have been more consistent
3. When adding a new subject through Study Manager, the auto-consent functions now sets the correct status if the "auto-consent" study parameter is set to yes.
4. A new study parameter has been included to allow auto-consent to be set for all, or specified, consent sections.
5. Updating the Date of Death no longer updates DOB
6. It is now possible to upload negative values in 'Discrete Values' within the data dictionary
7. A flaw in the data extraction security whereby users could possibly access subjects for which they did not have access rights has been corrected

### Data Analysis Enhancements

1. Template files for loading subject and phenotypic data have been added to the upload pages
2. Study Data' elements can now be chosen for export
